# Lecture 5 – Identifiers (2)

COSE212: Programming Languages

Jihyeok Park

2023 Fall

- Identifiers
  - Bound identifiers
  - Free identifiers
  - Shadowing
- VAE AE with variables
  - Concrete syntax
  - Abstract syntax
- In this lecture, we will
  - implement the interpreter for VAE
  - define the natural semantics for VAE

Interpreter and Natural Semantics for VAE

Numbers

Addition and Multiplication

Variable Definition

Variable Lookup

### 3. Examples

Let's evaluate the following VAE expressions:

How to evaluate the expression x + y into the value 3?

$$\vdash x + y \Rightarrow 3$$

We need to keep track of the **environment** that maps identifiers to values:

$$[x \mapsto 1, y \mapsto 2] \vdash x + y \Rightarrow 3$$

#### **Evaluation with Environments**

$$\vdash e \Rightarrow n$$

For AE, the interpreter takes an expression and returns a number.

#### **Evaluation with Environments**

For VAE, we extend the interpreter to take an **environment** as well.

$$\sigma \vdash e \Rightarrow n$$

We read it as "with the **environment**  $\sigma$ , the **expression** e evaluates to the **number** n"

For example, the interpreter should be able to evaluate like this:

$$[x \mapsto 1, y \mapsto 2] \vdash x + y \Rightarrow 3$$

Numbers Addition and Multiplication Variable Definition Variable Lookup

#### 3. Example:

For VAE, we need to 1) implement the **interpreter** with **environments** 

```
def interp(expr: Expr, env: Env): Value = ???
```

and 2) define the **natural semantics** with **environments**.

$$\begin{array}{c|cccc} & \sigma \vdash e \Rightarrow n \end{array}$$
 Expressions  $e ::= n & (\text{Num}) \\ & | e + e & (\text{Add}) \\ & | e \times e & (\text{Mul}) \\ & | \text{val } x = e; \ e & (\text{Val}) \\ & | x & (\text{Id}) \end{array}$ 

$$\begin{array}{ll} \mathsf{Environments} & \sigma \in \mathbb{X} \xrightarrow{\mathsf{fin}} \mathbb{Z} & (\mathsf{Env}) \\ \mathsf{Integers} & n \in \mathbb{Z} & (\mathsf{BigInt}) \\ \mathsf{Identifiers} & x \in \mathbb{X} & (\mathsf{String}) \end{array}$$

### Interpreter and Natural Semantics for VAE

```
def interp(expr: Expr, env: Env): Value = expr match
  case Num(n) \Rightarrow ???
  case Add(1, r) => ???
  case Mul(1, r) => ???
 case Val(x, e, b) \Rightarrow ???
  case Id(x) => ???
```

$$\left[\begin{array}{c} \sigma \vdash e \Rightarrow n \end{array}\right]$$
NUM 
$$\frac{???}{\sigma \vdash n \Rightarrow ???}$$

$$\text{Add } \frac{ \text{???} }{\sigma \vdash e_1 \times e_2 \Rightarrow \text{???} } \qquad \text{Mul } \frac{ \text{???} }{\sigma \vdash e_1 \times e_2 \Rightarrow \text{???} }$$

MUL 
$$\frac{???}{\sigma \vdash e_1 \times e_2 \Rightarrow ???}$$

Val 
$$\frac{???}{\sigma \vdash \text{val } x = e_1; \ e_2 \Rightarrow ???}$$
 Id  $\frac{???}{\sigma \vdash x \Rightarrow ???}$ 

ID 
$$\frac{???}{\sigma \vdash x \Rightarrow ???}$$

#### **Numbers**

```
def interp(expr: Expr, env: Env): Value = expr match
    ...
    case Num(n) => ???
    ...
```

$$\sigma \vdash e \Rightarrow n$$

Num 
$$\frac{???}{\sigma \vdash n \Rightarrow ???}$$

### Numbers

```
def interp(expr: Expr, env: Env): Value = expr match
    ...
    case Num(n) => n
    ...
```

$$|\sigma \vdash e \Rightarrow n|$$

Num 
$$\frac{1}{\sigma \vdash n \Rightarrow n}$$

With the **environment**  $\sigma$ , the **expression** n evaluates to the **number** n.

#### Addition

```
def interp(expr: Expr, env: Env): Value = expr match
    ...
    case Add(1, r) => ???
    ...
```

$$|\sigma \vdash e \Rightarrow n|$$

$$\texttt{ADD} \; \frac{\texttt{???}}{\sigma \vdash e_1 + e_2 \Rightarrow \texttt{???}}$$

#### Addition

```
def interp(expr: Expr, env: Env): Value = expr match
    ...
    case Add(1, r) => interp(1, env) + interp(r, env)
    ...
```

$$\sigma \vdash e \Rightarrow n$$

$$\text{Add} \ \frac{\sigma \vdash e_1 \Rightarrow n_1 \qquad \sigma \vdash e_2 \Rightarrow n_2}{\sigma \vdash e_1 + e_2 \Rightarrow n_1 + n_2}$$

With the **environment**  $\sigma$ , the **expression**  $e_1 + e_2$  evaluates to the **number**  $n_1 + n_2$  when

- With the **environment**  $\sigma$ , the **expression**  $e_1$  evaluates to the **number**  $n_1$ .
- With the **environment**  $\sigma$ , the **expression**  $e_2$  evaluates to the **number**  $n_2$ .

## Multiplication

```
def interp(expr: Expr, env: Env): Value = expr match
   ...
   case Mul(1, r) => interp(1, env) * interp(r, env)
   ...
```

$$\sigma \vdash e \Rightarrow n$$

$$\texttt{MUL} \ \frac{\sigma \vdash e_1 \Rightarrow n_1 \qquad \sigma \vdash e_2 \Rightarrow n_2}{\sigma \vdash e_1 \times e_2 \Rightarrow n_1 \times n_2}$$

With the **environment**  $\sigma$ , the **expression**  $e_1 \times e_2$  evaluates to the **number**  $n_1 \times n_2$  when

- With the **environment**  $\sigma$ , the **expression**  $e_1$  evaluates to the **number**  $n_1$ .
- With the **environment**  $\sigma$ , the **expression**  $e_2$  evaluates to the **number**  $n_2$ .

```
def interp(expr: Expr, env: Env): Value = expr match
   ...
   case Val(x, e, b) => ???
   ...
```

$$\sigma \vdash e \Rightarrow n$$

VAL 
$$\frac{\vdots \vdots}{\sigma \vdash \text{val } x = e_1; e_2 \Rightarrow ???}$$

```
def interp(expr: Expr, env: Env): Value = expr match
   ...
   case Val(x, e, b) => ... interp(e, env) ...
   ...
```

$$\sigma \vdash e \Rightarrow n$$

VAL 
$$\frac{\sigma \vdash e_1 \Rightarrow n_1 \dots}{\sigma \vdash \text{val } x = e_1; e_2 \Rightarrow ???}$$

With the **environment**  $\sigma$ , the **expression** val  $x = e_1$ ;  $e_2$  evaluates to the **number** ??? when

- **1** With the **environment**  $\sigma$ , the **expression**  $e_1$  evaluates to the **number**  $n_1$ .
- 2 ...

```
def interp(expr: Expr, env: Env): Value = expr match
   ...
   case Val(x, e, b) => ... env + (x -> interp(e, env)) ...
   ...
```

$$\sigma \vdash e \Rightarrow n$$

VAL 
$$\frac{\sigma \vdash e_1 \Rightarrow n_1 \qquad \sigma[x \mapsto n_1] \qquad \dots}{\sigma \vdash \text{val } x = e_1; e_2 \Rightarrow ???}$$

With the **environment**  $\sigma$ , the **expression** val  $x = e_1$ ;  $e_2$  evaluates to the **number** ??? when

- **1** With the **environment**  $\sigma$ , the **expression**  $e_1$  evaluates to the **number**  $n_1$ .
- **2** With the **environment**  $\sigma[x \mapsto n_1], \ldots$

```
def interp(expr: Expr, env: Env): Value = expr match
    ...
    case Val(x, e, b) => interp(b, env + (x -> interp(e, env)))
    ...
```

$$\sigma \vdash e \Rightarrow n$$

$$\text{Val} \ \frac{\sigma \vdash e_1 \Rightarrow n_1 \qquad \sigma[x \mapsto n_1] \vdash e_2 \Rightarrow n_2}{\sigma \vdash \text{val} \ x = e_1; \ e_2 \Rightarrow n_2}$$

With the **environment**  $\sigma$ , the **expression** val  $x = e_1$ ;  $e_2$  evaluates to the **number**  $n_2$  when

- **1** With the **environment**  $\sigma$ , the **expression**  $e_1$  evaluates to the **number**  $n_1$ .
- **2** With the **environment**  $\sigma[x \mapsto n_1]$ , the **expression**  $e_2$  evaluates to the **number**  $n_2$ .

## Variable Lookup

```
def interp(expr: Expr, env: Env): Value = expr match
    ...
    case Id(x) => ???
    ...
```

$$\sigma \vdash e \Rightarrow n$$

ID 
$$\frac{fff}{\sigma \vdash x \Rightarrow ???}$$

## Variable Lookup

```
def interp(expr: Expr, env: Env): Value = expr match
    ...
    case Id(x) => env.getOrElse(x, error(s"free identifier: $x"))
    ...
```

$$\sigma \vdash e \Rightarrow n$$

ID 
$$\frac{x \in \mathsf{Domain}(\sigma)}{\sigma \vdash x \Rightarrow \sigma(x)}$$

With the **environment**  $\sigma$ , the **expression** x evaluates to the **number**  $\sigma(x)$  when

**1** The variable x is in the domain of the environment  $\sigma$ .

\begin{array}{c} x \not\in \mathsf{Domain}(\varnothing) \\ \hline \varnothing \vdash x \Rightarrow \mathsf{Domain}(\varnothing$$

$$\sigma_0 = [x \mapsto 1]$$

## Summary

```
def interp(expr: Expr, env: Env): Value = expr match
  case Num(n) => n
  case Add(1, r) => interp(1, env) + interp(r, env)
  case Mul(1, r) => interp(1, env) * interp(r, env)
  case Val(x, e, b) => interp(b, env + (x -> interp(e, env)))
  case Id(x) => env.getOrElse(x, error(s"free identifier: $x"))
```

$$\sigma \vdash e \Rightarrow n$$

$$\overline{\sigma \vdash n \Rightarrow n}$$

$$\texttt{ADD} \ \frac{\sigma \vdash e_1 \Rightarrow n_1 \quad \sigma \vdash e_2 \Rightarrow n_2}{\sigma \vdash e_1 \times e_2 \Rightarrow n_1 \times n_2} \qquad \texttt{MUL} \ \frac{\sigma \vdash e_1 \Rightarrow n_1 \quad \sigma \vdash e_2 \Rightarrow n_2}{\sigma \vdash e_1 \times e_2 \Rightarrow n_1 \times n_2}$$

$$\text{Val} \ \frac{\sigma \vdash e_1 \Rightarrow n_1 \qquad \sigma[x \mapsto n_1] \vdash e_2 \Rightarrow n_2}{\sigma \vdash \text{val} \ x = e_1; \ e_2 \Rightarrow n_2} \qquad \text{ID} \ \frac{x \in \mathsf{Domain}(\sigma)}{\sigma \vdash x \Rightarrow \sigma(x)}$$

### Exercise #2

- Please see this document<sup>1</sup> on GitHub.
  - Implement interp function.
  - Implement freeIds function.
  - Implement bindingIds function.
  - Implement boundIds function.
  - Implement shadowedIds function.
- It is just an exercise, and you don't need to submit anything.
- However, some exam questions might be related to this exercise.

<sup>1</sup>https://github.com/ku-plrg-classroom/docs/tree/main/cose212/vae.
